

Appendix 6

Invitation

Workshop: Holiday in an old willow worker's home

**Looking for a sustainable, self sufficient concept
of holiday homes in the Biesbosch**

12 maart 2015

Biesboschcentrum Dordrecht

Nationaal Park De Biesbosch cooperates in the CaRe-Lands project (Carbon Reduction in Nature and Landscape Areas) to reduce CO2. In this we work together with 7 Dutch, Belgian and English partners. Biesbosch focuses on making old buildings more sustainable.

We asked 4 architects to make sketches to reshape an old willow worker's cottage in the Biesbosch into a holiday home. These sketches will be presented March 12, 2015.

Together with Natuur- en Recreatieschap Grevelingen and Provincie West-Vlaanderen, Nationaal Park De Biesbosch does research into energy neutral toilet buildings in isolated areas. The results of this research so far will be presented on March 12 also.

We invite you to be present at these presentations and to discuss with us the possibilities these presentations offer for new functions of old buildings in the Biesbosch and maybe in other nature areas also.

Participation in the workshop and lunch are free. The workshop will be in Dutch, but if you like to participate we will provide translation in English. If you like to participate, please send an email with your name, function and organisation to Marianne den Braven, m.den.braven@dordrecht.nl.

I hope to welcome you on March 12, 2015 in the Biesbosch!

Kind regards,

Marianne den Braven
Project officer
Parkschap Nationaal Park De Biesbosch

Programme

8.45 uur	Arrival of the guests
9.00 uur	Welcome and introduction to the project
9.10 uur	Presentation 1 of sketches by Mazin Abdulsada, Ingenieursbureau Drechtsteden, Dordrecht
